Payment Infrastructure for Bitcoin's Future

(Mezo Hack: Building Bitcoin's Future)

MezoPay

Problem

Taking crypto payments is **easy**, until it's **recurring**.

- **The Custody Trap:** Users are forced to lock tokens in a vault or hand control to third parties.
- **The UX Nightmare:** Asking users to sign manual monthly transactions leads to heavy churn.
- **The Infrastructure Void:** Building custom indexers and CRON jobs from scratch is incredibly painful.

Crypto subscriptions are either secure but annoying, or automated but custodial. There is no middle ground.

Solution

MezoPay is a **non-custodial payment layer** that runs on autopilot.

- **Permissionless Keepers:** Decentralized bots automatically process bills when they are due.
- **True Self-Custody:** Users approve a spending cap and keep MUSD in their own wallets until payment.
- **Developer-Ready Tools:** Merchants get REST APIs, webhooks, and dashboards live in minutes.

MezoPay - Demo

MUSD Payment Infrastructure

Accept Bitcoin-backed stablecoin payments on Mezo. One-time, recurring, and usage-based billing with instant on-chain settlement.

Start Accepting MUSD

View GitHub

✓ Non-custodial ✓ Direct settlement ✓ Developer API

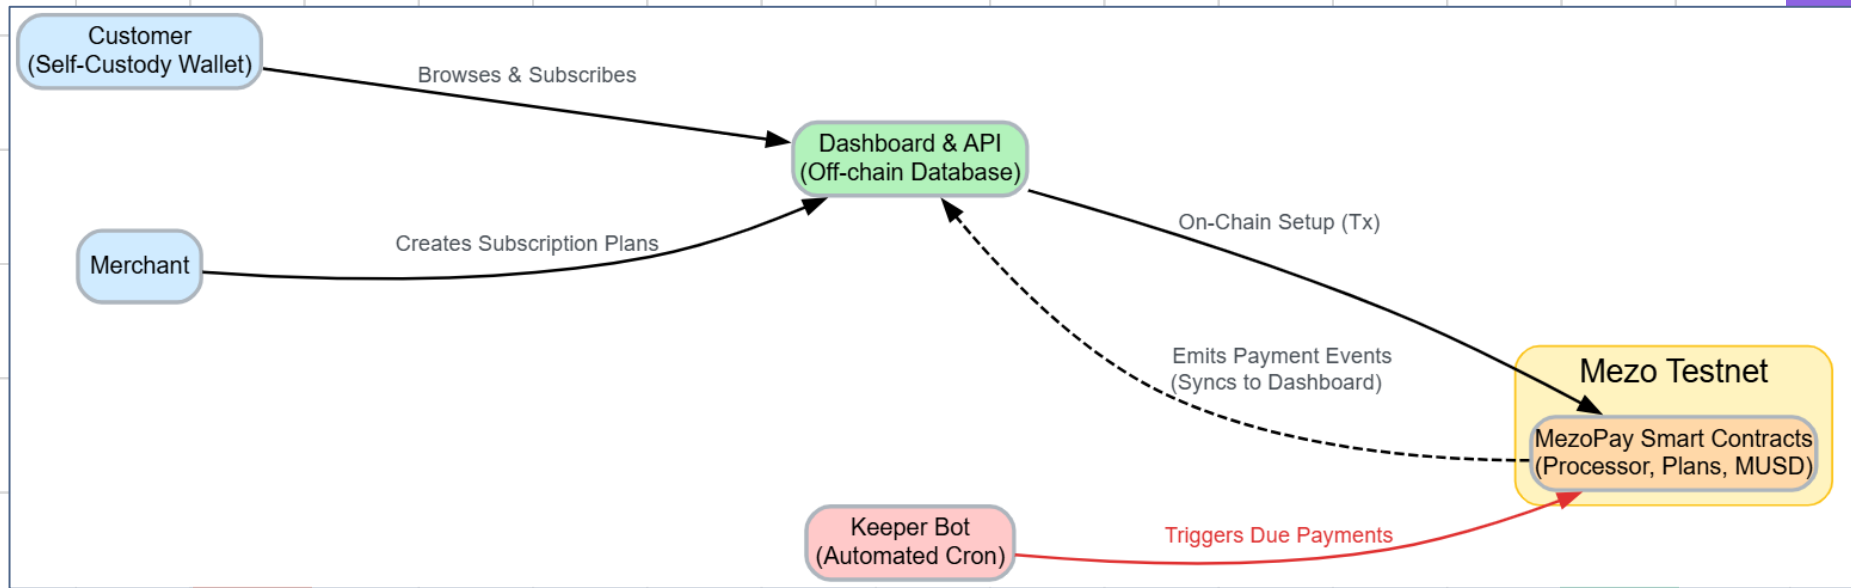

```
// Accept MUSD in 3 lines
import { MezoPay } from '@mezopay/sdk';

const pay = new MezoPay({ apiKey: 'mpk_live_...' });
pay.createButton('#checkout', {
  planId: 'plan_monthly_pro',
  onSuccess: (tx) => console.log('Paid!', tx.hash)
});
```
